THE PROBLEM

Everyone has AI. Almost nobody trusts it.

Only **5%** trust it enough to inform a deal decision, and **32%** cite accuracy as their concern.

First American Data & Analytics / DealGround, survey of 255 CRE professionals, May 2026

General-purpose AI replies with whatever it retrieves from the web and whatever it was trained on. It might **hallucinate**: inventing a figure that does not exist, attaching a source that does not say it, or doing the arithmetic wrongly.

So the analyst drills back down to the source anyway: the geography, blueprints, lease terms, floor plans, and the reversion maths by hand. **The power of AI goes unused.**

The solution is to bridge the trust gap by grounding AI with credible information and robust agentic tools → **our CRE AI Agent System**

Infamous hallucination and misalignment cases of ChatGPT & Claude

Rapid, reliable, and relevant

	Published research <i>Savills · CBRE · CoStar</i>	General-purpose AI <i>ChatGPT · Gemini · Claude</i>	This system <i>Deterministic spine, agentic edges</i>
Efficiency	Low You consolidate and analyse it yourself	Low You verify everything before you use it	High Insight from credible sources in seconds
Know your portfolio	No Market-wide data only	No Only what you paste in	Yes Analysis matched to your holdings
Credibility	High Enterprise research	Low Fragmented internet data	High Named sources: Savills, VOA, EPC register
Strategic insight	No You do your own research	Low Generic advice	High Specific to the buildings you hold

Is The Bailey priced right against its peers?

“Compare valuation of The Bailey in London with similar age buildings +/- 5 year, output into a concise table.”

RELIABLE PRICING ANALYSIS IN SECONDS

1 Recalled what you own.

The agent opened the portfolio first, found The Bailey among your five London holdings, and took its 1999 completion and City Core address from there.

2 Picked comparable buildings, then measured the gap.

It pulled every City Core building in the VOA rating list, kept the ones completed within five years of The Bailey as you asked, and computed the median and the gap.

3 Turned findings into strategy.

The Bailey sits above its peer group, which is exposure at the next rent review.

Compare valuation of The Bailey in London with similar age buildings +/- 5 year, output into a concise table.

✓ Used 2 tool calls

The Bailey is valued at **£616.77 per m²**, placing it near the upper end of its City Core peer set built within ±5 years (1994–2004).

Valuation Comparison (Built 1994–2004)

Building	Year Built	Floor Area (sq ft)	VOA Valuation (£/m ²)
The Bailey (Subject)	1999	115,000	£616.77
Procession House, 55 Ludgate Hill	1999	105,200	£648.89
45 Gresham Street	1998	170,000	£642.13
25 Cannon Street	2000	115,000	£631.14
Watling House, 33 Cannon Street	1999	86,366	£559.48
100 Wood Street	2000	146,485	£518.14
80 Cheapside	1994	81,559	£500.17
Fleet Place House, 2 Fleet Place	2000	92,185	£455.38
25 Gresham Street	2002	119,823	£417.90

Source: Valuation Office Agency (VOA) 2026 rating list, 2024 valuation basis (as of 2026-04-01).

Across the broader 14-building peer set, The Bailey stands 17.6% (£984,624/year) above the street median of £524.61 per m², creating exposure to tenant renegotiation pressure.

What's driving demand right now?

What's driving demand right now?

✓ Used 11 tool calls

Active demand in Central London stands at a record 15,700,000 sq ft at 2026H1 (+69.0% vs long-run average), driven by occupiers expanding footprints (43.0% expanding vs 12% seeking to decrease; 15% are new market entrants) (Source: Savills, Central London Office Market Watch Q2 2026, as of 2026-08-06).

Key demand engines right now:

- **Tech & AI expansion:** Tech & Media take-up in 2026H1 was +64.0% vs its long-run average, led by AI commitments such as Anthropic taking 158,138 sq ft at 1 Triton Square and OpenAI taking 77,521 sq ft at Jahn Court, Regent Quarter (Savills, as of 2026-08-06).
- **Insurance & Financial pipeline:** While Insurance & Financial completed take-up was 878,112 sq ft in 2026H1 (-21.0% vs 5-year average), the sector accounts for 41% of the 3,100,000 sq ft currently under offer across Central London (Savills, as of 2026-08-06).
- **Large Grade A squeeze:** 41 active occupier requirements over 100,000 sq ft are chasing just 21 available Grade A options as of 2026Q2 (Savills, as of 2026-08-06).

Decision: Hold large prime floorplates (such as 99 City Road and Regent Quarter) to leverage landlord pricing power against the shortage of 100k+ sq ft Grade A space.

RELIABLE DEMAND ANALYSIS IN SECONDS

1 Resolved what you mean.

It checked what figures exist on database, then scoped every lookup to Central London at the latest published half.

2 It pulled six market figures and the deals behind them.

Active demand, take-up, the share of occupiers expanding, large requirements, space under offer, one sector's take-up, and the named lettings. Each with its source and its date.

3 Found a gap, and stayed with the source.

Tech & Media take-up is **not published** for this half. Instead of estimating one, it reported the change the source does give: 64% above the long-run average.

4 Turned findings into strategies for your portfolio.

The response closes on 99 City Road and Regent Quarter, and on a decision, rather than on Central London in general.
